

Your guide to understanding motility.

Motility disorders are poorly understood and often difficult to diagnose. But that could soon change. SmartPill® is an ingestible capsule that collects, and wirelessly transmits, pH and pressure data as it travels through the body. From these measurements, SmartPill provides gastric emptying time, as well as combined small and large bowel and total gut transit times: a wealth of valuable insight to help clarify what your best next steps might be. Because it's administered in-office, SmartPill is convenient for you and your patients. If you're seeking motility solutions, follow the new leader in GI diagnostics. SmartPill. Learn more at 800-644-4162 or www.smartpillcorp.com.
